

Atlas Technical Taxonomy Review

Atlas' taxonomy capabilities power enhanced search and targeted content experiences, bringing relevant information to employees who need it, where they need it. Realizing these benefits requires proper taxonomy mapping and subsequent populating of appropriate metadata for each document. When you installed and set up Atlas, this process was performed as part of the rollout.

But over time, you may find that:

- Employees are searching for things you did not foresee when you set up your taxonomy, or...
- The business has evolved, and you need to revise taxonomy mappings to maintain relevance.

That's why ClearPeople is offering an Atlas Taxonomy Review service; to analyze your current taxonomy performance, uncover deficiencies, and map business changes to update term definitions, as well as optimize ongoing performance.

The Offering

The Taxonomy Review service includes a detailed review of your current taxonomy along with a review of changes to your business structure. The aim is to provide feedback and recommendations that enhance your taxonomy's effectiveness.

During the engagement, ClearPeople uses the main search facility to review your content and review how taxonomy is applied, whether it's correctly used, and if it is returning accurate and targeted results.

Beyond a technical taxonomy review, the service includes a review of content contained within your Atlas platform to assess how content is currently tagged against the taxonomy - revealing areas or types of content where the taxonomy could be better applied for an improved and enhanced user experience.

ClearPeople will also delve into an example area, providing recommendations and training on how to achieve an optimal platform set-up. Delivering correctly targeted information means employees work efficiently and make informed decisions that drive measurable business value while improving employee satisfaction.

The Business Value

Periodic taxonomy reviews yield multiple business benefits, because taxonomy is a fundamental to how information is categorized, stored, and retrieved across the organization. Here are some key benefits:

Improved searchability and discoverability: Periodic taxonomy reviews ensure metadata remains relevant and up-to-date, making it easier for employees to find the information they need.

Enhanced compliance: Taxonomy structures can help enforce data governance policies and compliance with constantly evolving legal and regulatory standards.

Future-proofing: Periodic taxonomy assessments ensure that your organization is prepared for future technological developments, such as AI, which can further leverage your taxonomy to automate and improve organizational processes.

The Investment

How much does it cost?

£4,000

\$5,000

€5,000

How much time do I need to allocate?

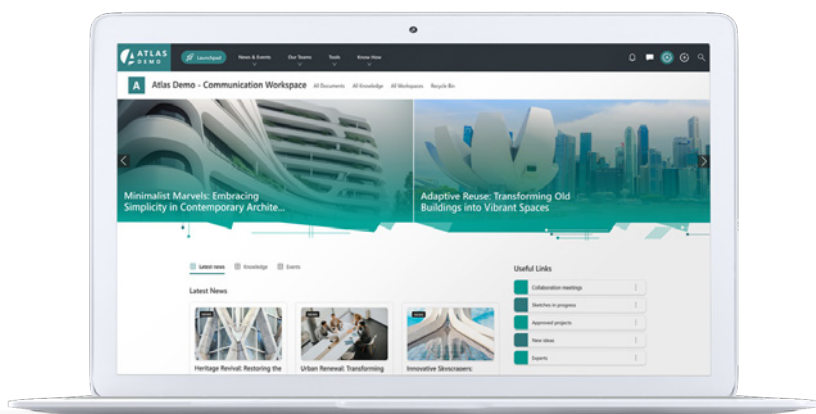

In total, you should allocate one day to work with us. What resource investment is required? We can work with a designated individual or with the team responsible for taxonomy.

Important notes:

- End user training is not included
- Having an existing Atlas taxonomy is a pre-requisite for this offer
