£1.46m The average cost of cyber security breach is £1.46 million for a big business²

PEOPLE CHALLENGES
Employee expectations
Talent shortages and high competition
Disengaged employees cost US organisations \$450 – \$550 billion each year⁵

Where your IT investment has the most impact

Supporting hybrid work

Flexible work drives employee engagement and performance⁶.

Business units that score high on employee engagement show higher levels of profitability too⁶.

A true digital workplace reduces real-estate and other costs, saving over **\$11,000** per half-time remote worker per year⁷.

Enhancing employee engagement

Engagement is critical to your bottom line. Highly engaged companies are proven to outperform the least engaged companies⁸.

Consolidating operating costs

Consolidating your IT landscape reduces the cost of support and maintenance overheads, especially for expensive legacy applications. Plus it makes it simpler for people to access and use what they need to work.

Upping productivity

Help your employees work smarter, better and faster with easy access to the information, digital tools, processes and experts they need.

Companies with a highly engaged workforce scored 17 percent higher on productivity⁹.

Reducing risk

Changes in the way we work have exposed new cyber attacks.

Enterprise grade security and smart tools for provisioning and governance make compliance simpler and more user-friendly.

Employees make better decisions and reduce the risk of a data breach if they are well informed, receive relevant notifications and don't miss important updates amid the noise.

Increasing operational efficiency

Automation and enabling self-service help your team apply their expertise where it really makes a difference.

How Atlas by ClearPeople optimises companies' IT investments

"What has been key is the ability to deliver complex features and functionality through a simple and engaging user experience that makes sense to our users wherever they are, in the office, on-site or in a firstline worker role."

RYAN MACNAMEE, LAING O'ROURKE

"I am pleasantly surprised at how quick and easy the Atlas platform is in refining searches and enabling me to find the information I need within seconds".

STUART WHITTLE, WEIGHTMANS

"We see staff being more engaged through Atlas, which we [can] track by seeing that they are better equipped and able to deal with any and all challenges."

PHIL WHITE, PLACES LEISURE

"Atlas excels at making information more manageable for organisations looking to build on their Microsoft 365 investment."

CLEARBOX REPORT 2023

SUPPORTING NEW WAYS OF WORKING

Atlas makes Microsoft 365 easier to use and seamlessly extends its capabilities. Atlas caters to the demands of all users and wherever they are working.

SIGNIFICANTLY UPPING PRODUCTIVITY

Atlas saves a professional services firm **\$1.5 million annually** on one task alone by reducing the time spent looking for information and switching between tools.

INCREASING OPERATIONAL EFFECTIVENESS

A global asset management firm had 40 terabytes of important but unmanaged data, and none of it was tagged for search. Atlas solved this problem quickly and easily, and now supports a range of other strategic IT objectives.

CONSOLIDATING OPERATING COSTS

Some sectors still rely on high-cost legacy, bespoke or third-party solutions. Atlas is frequently used to consolidate these solutions into a M365 infrastructure, saving one of our customers £100K per year and another client reduced their costs by at least 30% per year.

REDUCING COMPLIANCE BREACHES

Balancing effective compliance, security and employee experience isn't easy. Atlas overcomes this challenge by automatically and consistently categorising data.

Atlas is a digital workplace platform that powers **Microsoft 365**
